

ENHANCING USER EXPERIENCE WITH **HUMAN FACTORS EXPERTISE**

CASE STUDY |||||

A long-exposure photograph of the Golden Gate Bridge at night. The bridge's iconic orange-red structure is illuminated, with light trails from traffic visible on the deck. The suspension cables and towers are clearly defined against a dark blue twilight sky. In the background, the city of San Francisco is visible, with its lights reflecting on the water of the bay.

ABOUT THE CLIENT

A leading **US based multinational technology** company renowned for its **high-quality innovative hardware, software, and digital services.**

THE CHALLENGE

Before product launch to the general public, the customer needs to collect large volumes of data on the human product interface. Bandwidth for the product team is extremely low.

Key Challenges:

01

The need for a **dedicated team** to work closely with product managers, providing valuable insights into **ergonomics, psychology, and human factors** across multiple products.

02

A **scalable, flexible team structure** that could adjust to fluctuating project demands without adding significant management overhead.

03

Engineering Standards (ES) bring-up ownership, ensuring seamless prototype handling and study operations.

To address these challenges, the client required a strategic partner capable of assembling an expert team. This team would take ownership of key activities and align itself with the company's product launch cycles.

THE SOLUTION

Sasken responded with a **Managed Services Delivery Model**, identifying and deploying a specialized team of experts, comprising:

- **Lead:** Embedded in the client's **Human Factors (HF) activities**, overseeing research, study execution, and mentoring the team.
- **Proctors:** Responsible for study execution, user engagement, usability testing, and prototype evaluation.
- **Researchers:** Supporting research activities and addressing seasonal project demands.

The Managed Services model offered:

End-to-end ownership of HF activities:

Including **study design, user testing, data capture, and analysis.**

Scalability & cost-effectiveness:

Ensuring seamless **ramp-up and ramp-down** based on product launch cycles.

Engineering Standards (ES) bring-up:

Taking full responsibility for prototype evaluation and ensuring usability consistency.

An internship program:

Providing additional support during peak periods while cultivating future talent.

Customer-supported forecasting:

Ensuring efficient deployment of resources based on anticipated project needs.

A differentiated approach:

Unlike traditional outsourcing models, Sasken's **integrated team structure** eliminates inefficiencies, providing a seamless extension of the client's internal workforce.

KEY ACTIVITIES

Sasken's team played a pivotal role in conducting human factors studies and ensuring seamless execution. Their contributions included:

Brainstorming study details and designing user tests.

Identifying and inviting users for testing.

Developing and deploying surveys to gather insights.

Conducting user studies at multiple locations.

Managing Customer devices and prototypes responsibly throughout the study lifecycle.

Performing in-depth data analysis and statistical assessments to extract actionable insights.

Solving logistical challenges to ensure seamless execution of studies.

Utilizing usability testing tools and remote platforms for enhanced efficiency.

THE OUTCOME

Sasken's **strategic approach and execution excellence** led to significant outcomes:

Managed Services model success

Enabled minimal **management overhead** while allowing the client to **scale operations efficiently** based on product cycles.

Seamless execution of Human Factors studies

Providing valuable insights that **improved product usability and customer experience**.

Strategic workforce alignment

The internship program helped address fluctuating workloads while **fostering industry-ready talent**.

Customer-backed resource planning

Leveraging **forecasting support** from the client to optimize team deployment.

A competitive edge in user experience

By integrating human factors insights early in product development, Sasken helped drive **higher customer satisfaction and product adoption**.

Geographic expansion potential

While initially based in the **USA**, the success of the engagement has opened discussions for expansion to **Europe, India, China, and Japan**.

CONCLUSION

Through a deep understanding of **human factors, usability, and user behavior**, Sasken has helped the client strengthen its **customer experience and personalization efforts**.

By deploying a **scalable, flexible team**, Sasken enabled the client to **optimize study execution, streamline operations, and make data-driven improvements** to its product designs.
